

The board recognizes the importance of students maintaining physical health and proper nutrition in order to take advantage of educational opportunities. The board further recognizes that student wellness and proper nutrition are related to a student's physical well-being, growth, development and readiness to learn. The board is committed to providing a school environment that promotes student wellness, proper nutrition, nutrition education and regular physical activity as part of the total learning experience.

A. SCHOOL HEALTH ADVISORY COUNCIL

The board supports a district School Health Advisory Council to help plan, implement and monitor this policy as well as other health and nutrition issues within the school district. The council will serve as an advisory committee regarding student health issues. The council may examine related research and laws, assess student needs and the current school environment, review existing board policies and administrative regulations, collaborate with appropriate community agencies and organizations, and help raise awareness about student health issues. The council also will assist in developing the student wellness policy and may make other policy recommendations to the board related to health issues necessary to promote student wellness.

The council will be composed of school district, local health department and community representatives to provide information in the following eight areas: safe environment, physical education, health education, staff wellness, health services, mental and social health, nutrition services and parent/family involvement. Of those appointed to the council, there will be at least one person from each of the following groups: school board member, school district administrator, district food service representative, student, parent/guardian and member of the public.

The council will provide periodic reports to the board regarding the status of its work. In addition, the council will assist the superintendent in creating an annual report which includes the minutes of physical activity and the minutes of physical education and/or healthful living education received by students in the district each school year, and any other information required by the State Board of Education.

B. NUTRITION EDUCATION

The board believes that promoting student health and nutrition enhances readiness for learning and increases student achievement. The goals of nutrition education are (1) to provide appropriate instruction for the acquisition of behaviors which contribute to a healthy lifestyle for students and (2) to teach, encourage and support healthy eating by students.

The board will provide nutrition education within the Healthful Living Standard Course of Study and Grade Level Competencies adopted by the State Board of Education. Nutrition education will provide all students with the knowledge and skills needed to lead

healthy lives. Students should learn to address nutrition-related health concerns through age-appropriate nutrition education lessons and activities.

Nutrition education should extend beyond the school environment by engaging and involving families and communities. School district personnel may coordinate with agencies and community organizations to provide opportunities for appropriate student projects related to nutrition. School district personnel will work to disseminate consistent nutrition messages throughout the school district, schools, classrooms, cafeterias, homes, community and media.

C. PHYSICAL EDUCATION AND PHYSICAL ACTIVITY

The goal of the physical education program is to promote lifelong physical activity and provide instruction in the skills and knowledge necessary for lifelong participation in physical activity. To address issues such as overweight, obesity, cardiovascular disease and Type II diabetes, students enrolled in kindergarten through eighth grades will participate in physical activity as part of the district's physical education curriculum. The physical education course will foster support and guidance for being physically active, will help students know and understand the value of being physically fit, and will teach students the types of activities that contribute to total fitness. The course will be taught in an environment where students can learn, practice and receive assessment on age appropriate skills as defined in the North Carolina Healthful Living Standard Course of Study.

Schools will strive to provide opportunities for age- and developmentally-appropriate physical activity during the day for all students, so that students can learn to exhibit a physically active lifestyle. A minimum of 30 minutes of moderate to vigorous physical activity will be provided daily by schools for kindergarten through eighth-grade students. Such activity may be achieved through a regular physical education class, recess, dance, classroom energizers and/or other curriculum-based physical activity programs. The principal will work with teachers to ensure that students meet the minimum physical activity requirement.

To ensure that students have ongoing opportunities for physical activity and maintain a positive attitude towards physical activity, structured/unstructured recess and other physical activity shall not be taken away from students as a form of punishment. In addition, severe and inappropriate exercise may not be used as a form of punishment for students.

D. NUTRITION GUIDELINES

Consistent with policy 6200, Goals of Student Food Services, all foods available in the district's schools during the school day will be offered to students with consideration for promoting student health, reducing childhood obesity, providing a variety of nutritional meals and promoting life-long healthy eating habits.

Foods provided through the National School Lunch or School Breakfast Programs will comply with federal nutrition standards. In addition, food selections will also be consistent with statewide nutrition standards established by the State Board of Education and with Board policy 6230, Nutritional Standards for Food Selection.

Competitive foods are defined as foods offered at school other than through the National School Lunch or School Breakfast Programs including food, snacks and beverages from a la carte menus, vending machines and outside suppliers. Competitive sales are prohibited between 12:01 AM until the last student is served lunch. In addition, all vending machine sales will comply with the requirements of G.S. 115C 264.2 and *Eat Smart: North Carolina's Recommended Standards for All Foods in School*.

E. OTHER SCHOOL-BASED ACTIVITIES TO PROMOTE WELLNESS

Food offered in the district's schools during the school day will be considered to promote health, reduce childhood obesity, provide a variety of nutritional means, promote life-long healthy eating habits, and provide consistent wellness messages that are conducive to healthy eating. Asheboro City Schools' student wellness policy encourages students and staff to make healthy food choices throughout the total school environment including classroom snacks, alternatives to food as reward, and classroom celebrations.

F. GUIDELINES FOR REIMBURSABLE MEALS

The director of child nutrition will ensure that school district guidelines for reimbursable meals are not less restrictive than regulations and guidelines issued for schools in accordance with federal law.

G. IMPLEMENTATION AND REVIEW OF POLICY

The superintendent or his/her designee will be responsible for overseeing implementation of this policy and monitoring district schools, programs and curriculum to ensure compliance with this policy, related policies and established guidelines or administrative regulations. Each principal will report to the superintendent or designee regarding compliance in his/her school. Staff members responsible for programs related to student wellness also will report to the superintendent or designee regarding the status of such programs.

The superintendent will annually report to the board on the district's compliance with laws and policies related to student wellness.
